# 6-Input 1-Output Video Switch

# Monolithic IC MM1140

September 26, 2002

### Outline

This is a high performance 6-input 1-output video switch IC for TV/BS signal switching. It is ideal for integrating multi-input circuits into one chip.

#### **Features**

1. Mute function (mute pin: enable to input)

discontinue 2. Crosstalk -70dB (at 4.43MHz)

4.75~13.5V 3. Supply voltage

4. Frequency response 10MHz

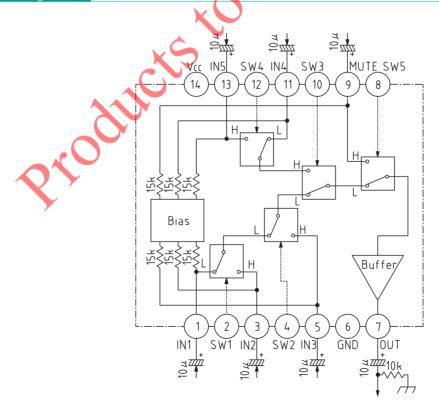

#### Package

SOP-14B (MM1140XF)

### **Applications**

- 1. TV
- 2. VCR
- 3. Other video equipment

### **Block Diagram**

## Pin Description

| Pin no. | Pin name | Internal equivalent circuit diagram | Pin no. | Pin name | Internal equivalent circuit diagram |
|---------|----------|-------------------------------------|---------|----------|-------------------------------------|
| 1       | IN1      | VCC 220 \$ 15k                      | 8       | SW5      | 10k                                 |
|         |          | 9.1k \$                             | 0       | MUTE     | VCC 220 \$ 15k                      |
| 2       | SW1      | 10k                                 |         |          | 9.1k \$                             |
| 3       | IN2      | VCC 220 \$ 15k                      | 10      | SW3      | 10k                                 |

## Measuring Procedures (Except where noted otherwise, Vcc=5.0V, VC1=Vcc, VC2=0V)

| Item             |                     | Symbol            | Switch state | Measuring Procedure  |  |  |  |
|------------------|---------------------|-------------------|--------------|--|--|--|--|
| Consumption ou   | Consumption current |                   | 1            | Connect a DC ammeter to the Vcc pin and measure. Vcc is 5V and                             |  |  |  |
| Consumption cu   | rrent               | Id                | 1            | the ammeter is shorted for use in subsequent measurements.                                 |  |  |  |
| Voltage gain     |                     |                   |              | Input a 2.0V <sub>P-P</sub> , 100kHz sine wave to SG, and obtain Gv from the               |  |  |  |
|                  |                     | Gv                | 2            | following formula given TP12 voltage as V1 and TP14 voltage as V2.                         |  |  |  |
|                  |                     |                   |              | Gv=20LOG (V2/V1) dB  |  |  |  |
| Fraguanay        |                     |                   |              | For the above Gv measurement, given TP14 voltage for 10MHz as                              |  |  |  |
| Frequency        | _                   | Fc                | 2            | V3, Fc is obtained from the following formula.   |  |  |  |
| characteristic   | G                   |                   |              | Fc=20LOG (V3/V2) dB  |  |  |  |
| Differential     | .i.a                | DG                | 2            | Input a 2.0V <sub>P-P</sub> staircase wave to SG, and measure differential gain at TP14.   |  |  |  |
| Differential ga  | urı                 | DG                | 2            | APL=10~90%   |  |  |  |
| Differential pha | ase                 | DP                | 2            | Proceed as for DG, and measure differential phase.   |  |  |  |
| Total harmon     | ic                  | THD               | 2            | Input a 2.5V <sub>P-P</sub> , 1kHz sine wave to SG, connect a distortion meter to          |  |  |  |
| distortion       |                     | тнр               |              | TP14 and measure.  |  |  |  |
| Output offset vo | Itage               | Voff              | 3            | Measure the DC voltage difference of each switch status at TP13.                           |  |  |  |
|                  |                     |                   |              | Assume VC1=2.1V, VC2=0.7V.   |  |  |  |
| Cusastalle       |                     | Ст                | 9            | Input a 2.0V <sub>P-P</sub> , 4.43MHz sine wave to SG, and given TP12 voltage as V4        |  |  |  |
| Crosstalk        |                     |                   |              | and TP14 voltage as V5, CT is obtained from the following formula.                         |  |  |  |
|                  |                     |                   |              | C <sub>T</sub> =20LOG (V5/V4) dB   |  |  |  |
|                  | ы                   | <i>V</i> 1        |              | Impress different optional DC voltages on TP6 and TP7. Gradually                           |  |  |  |
| Switch 1         | ge H                | V <sub>IH</sub> 1 | 4            | raise from VC3=0V. TP1 voltage when TP7 voltage is output on TP13                          |  |  |  |
| input voltage    |                     | VIL1              | 4            | is V <sub>H</sub> 1. Gradually lower from VC3=V <sub>CC</sub> . TP1 voltage when TP6       |  |  |  |
|                  | L                   |                   | Ċ            | voltage is output on TP13 is V <sub>IL</sub> 1.  |  |  |  |
|                  | Н                   | Vih2              | 2            | Impress different optional DC voltages on TP6 and TP8. Gradually                           |  |  |  |
| Switch 2         | П                   | VIHZ              | ) [          | raise from VC3=0V. TP2 voltage when TP8 voltage is output on TP13                          |  |  |  |
| input voltage    | ge 🔝                | W 0               | 5            | is V <sub>IH</sub> 2. Gradually lower from VC3=V <sub>CC</sub> . TP2 voltage when TP6      |  |  |  |
|                  |                     | Vп.2              |              | voltage is output on TP13 is VII.2.  |  |  |  |
|                  |                     | W- 0              |              | Impress different optional DC voltages on TP6 and TP9. Gradually                           |  |  |  |
| Switch 3         | Н                   | Vін3              | c            | raise from VC3=0V. TP3 voltage when TP9 voltage is output on TP13                          |  |  |  |
| input voltage    |                     | 17.0              | 6            | is Vih3. Gradually lower from VC3=Vcc. TP3 voltage when TP6                                |  |  |  |
|                  | L                   | Vil3              |              | voltage is output on TP13 is V <sub>II</sub> 3.  |  |  |  |
|                  |                     | 37 4              |              | Impress different optional DC voltages on TP9 and TP10. Gradually                          |  |  |  |
| Switch 4         | Н                   | Vih4              | _            | raise from VC3=0V. TP4 voltage when TP10 voltage is output on                              |  |  |  |
