

About Circuit Cellar Magazine

Circuit Cellar is the premier media resource for professional engineers, academic technologists and other electronics technology decision makers worldwide involved in the design and development of embedded processor- and microcontroller-based systems across a broad range of applications. Produced monthly (print and digital), *Circuit Cellar* provides critical information on embedded, electronics technology and does so at level of depth and detail tailored specifically for our readers. Our mission is tackle the key *what*, *why* and *how* issues of technology to help readers make smart choices with their engineering projects—all the way from prototype to production. Circuit Cellar's editorial calendar has been expanded to ensure we cover all the most critical embedded technology topics important to today's engineering professional.

Each month features calendar topics in these three sections:

Special Feature — As its name implies, this section zeros in on the major application and design topics that are driving today's embedded electronics industry.

Technology Spotlight — This section shines a light on the emerging trends and technologies most critical to developing microcontroller- and embedded processor-based systems.

Data Sheet — This product roundup style section focuses in on the representative products within one major category each month.
