

About Visuino

Visuino is the latest innovative software from Mitov Software. A visual programming environment allowing you to program your Arduino boards. Although it currently supports the official Arduino boards, it is not restricted to their support alone and requests to support new hardware are welcome.

- [Features](#)
- Drag and drop ready to use components for controlling common Arduino sensors, modules, and peripherals
- Easy to use multichannel serial communication

- Built in Scope, and instrumentation panel for visualization of the received data from the sensors
- Automatic configuration of the pins of all standard Arduino boards
