

STRUCTURE	Silicon Monolithic Integrated Circuit
PRODUCT NAME	System Power Supply with MUTE Function
TYPE	B A 4 9 1 5 - V 1 1
FEATURES	• Very low standby current • MUTE SYSTEM, RESET with Output delay for microcontroller, +B/ACC Voltage detection

○ABSOLUTE MAXIMUM RATINGS(Ta=25°C)

Parameter	Symbol	Limits	Unit
Supply Voltage	+B/ACC	30	V
Power Dissipation	Pd	3400	mW
Operating Temperature Range	Topr	-40~85	°C
Storage Temperature Range	Tstg	-55~150	°C
Peak Supply Voltage	+B/ACC peak	50(*1)	V

(*1) $t_r \geq 1\text{msec}$ Bias voltage less than 200msec

○RECOMMENDED OPERATING CONDITIONS(Ta=25°C)

Parameter	Symbol	Limits			Unit	Comment
		Min.	Typ.	Max.		
Recommend Supply Voltage Range1	+B	6.6	13.2	18	V	VDD output
Recommend Supply Voltage Range2	+B	9.6	13.2	18	V	COM, ANT+B, AMP+B output
Recommend Supply Voltage Range3	VDD	1.5	-	5.25	V	RESET output
Recommend Supply Voltage Range4	VDD	3.0	-	5.25	V	Bu-DET, MUTE, ACC-DET output

*The above conditions may not meet electrical characteristics.

*This product is not designed for normal operation within a radio active environment.

*The product described in this specification is a strategic product (and/or service) subject to COCOM regulations. It should not be exported without authorization from the appropriate government.

*Status of this document

The Japanese version of this document is the formal specification.

A customer may use this translation version only for a reference to help reading the formal version.

If there are any differences in translation version of this document, formal version takes priority.

○NOTES FOR USE

1. Over Voltage Protection Circuit

The Over Voltage Protection Circuit function is that when the difference voltage of VIN1 and GND exceeds over about 27V (room temperature), the each output turn off. Please be sure of the power supply voltage range you use.

2. Bypass Capacitor between +B and Gnd

It recommend to put into bypass capacitor with 0.47 μ F degree into the nearest position between +B and Gnd.

3. The oscillation stopper of output capacitor

Please use the oscillation stopper between the ANT+B, AMP+B, COM, VDD each output and GND. It recommend to use the Electrical Capacitor 10 μ F and Ceramic Capacitor 0.1 μ F (B-class) in pararell for ANT+B and AMP+B, the Electrical Capacitor 10 μ F and the Ceramic Capacitor over 1 μ F (B-class) and serial resistor 1 Ω in pararell for COM, and for VDD using the Super Capacitor 47 μ F (TOKIN, 5.5V) and the electrical Capacitor over 10 μ F and Ceramic Capacitor 0.22 μ F (B-class) in pararell and not using it the electrical Capacitor over 10 μ F and Ceramic Capacitor 1 μ F (B-class) and serial 2.2 Ω in pararell.

4. MUTE pin pull-up resistor

Connect the Mute pin pull-up resistor to less than VDD voltage.

5. +B plus surge

In case of the over 50V surge at +B, use the Power Zener Diode between +B-Gnd.

6. +B minus surge

In case of the less than Gnd voltage at +B, use the Protection Diode between +B-Gnd.

7. Plus and Minus surge at ACC

In case of the over 120V at ACC, use the shotteky diode or diode between ACC-Gnd.

8. ACC terminal

10k Ω serial resistor at ACC, have to be high accuray : temperature characteristics etc. But, you use except 10k Ω , ACC threshold voltage and hysteresis voltage change.

In case of the over 33pF capacitor at ACC, the over terminal might occur error function. Please be sure to the application.

- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
