

CA-508 12V Boost Power Supply Module LCD TCON board VGL VGH VCOM AVDD 4 Adjustable

CA-508 12V Boost board module

ECHO

Product details of

Product name : Panel Booster Module

Model: CA-508

Input Voltage: 12V DC or 3.3V DC (By default set to 12V input)

Output VGH: 17V~23V

Output VGL: -6V~-8V

Output VCOM: 3V~5V

Output AVDD: 7.5V~12V

Replace your damaged LCD TCON Board Power Supply.

Compact Design

Size: 25x42mm

What is CA-508 Panel Booster?

CA-508 is an electronics circuit board that is called a panel booster module. Because using this module we modify the LCD LED TV panel and repair the panel problem.

Actually this module we use when we getting voltage missing in the panel PCB, that time using this module we provide that particular voltage in the panel PCB and fix the problem.

Advantage of CA-508 Panel Booster Module

Easy to install in any normal LCD LED TV Panel.

Input voltage is 12V in both, which you get in the TV very easily.

have separate potentiometer for different output voltage.

You can set the output voltage according to your need.

PANEL BOOSTER FEATURES
