

Typical Performance

- Ultra wide range input (2:1), 10W output
- Conversion efficiency 91% (Typ)
- Isolation voltage 1500Vdc
- Standby power loss: 0.036W(Typ)
- Ultra fast startup: 1ms(Typ)
- Working temperature: -40°C ~ +85°C
- Input undervoltage, output short circuit, overcurrent, overvoltage protection
- Metal housing, low output ripple

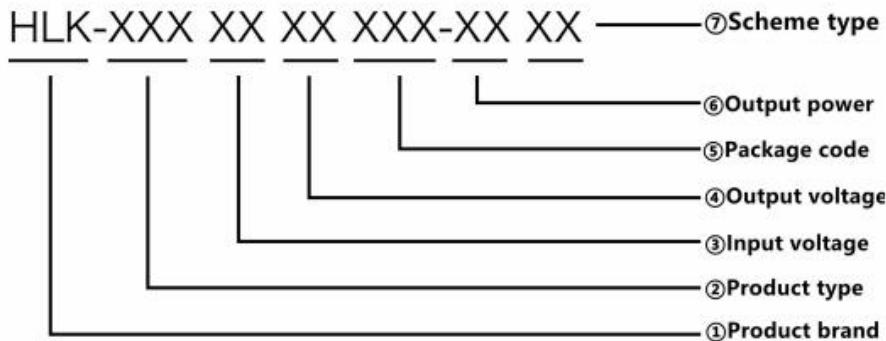

10W, Ultra Wide Voltage Input, Isolated Regulated Single/Dual,
DIP Package, DC-DC Modular Power Supply

RoHS

VR(A)B_YMD-10WR3 series products output power of 10W, 2:1 wide voltage input range, efficiency up to 91%, 1500VDC conventional isolation voltage, allowable operating temperature -40 °C to +85 °C, with input under-voltage protection, output over-voltage,over-current,short-circuit protection,bare metal to meet the CISPR32/EN55032CLASSA. Widely used in medical, industrial control, electric power, instrumentation, communication, railroad and other fields.

Note: 1. Due to limited space, the above is only a typical product list, if you need products other than those listed, please contact our sales department.

2. Maximum capacitive load indicates the maximum capacitive load that can be connected to +Vo or -Vo. If this value is exceeded, the product will not start normally.

3. Input voltage exceeding the maximum value may cause permanent damage to the product.

Test Conditions: Unless otherwise specified, all parameters are measured at nominal input voltage, purely resistive rated load and room temperature of 25°C.

- ① Product models with output voltage of ±5VDC and ±9VDC, the maximum value of output voltage accuracy is ±5% under 0%-5% load conditions;
- ② The index of load adjustment rate is ±5% when tested under 0%-100% load working conditions;
- ③ 0%-5% load ripple & noise is less than or equal to 5% Vo. Ripple and noise test method twisted pair test method, you can add capacitive load at the output to reduce light load ripple.

Output Filter Peripheral Recommended Circuit

Positive & Negative Dual Output Products

Single Output Products

For ripple & noise requirements in general, the peripheral recommended to use only C2, C5 can be; for ripple & noise requirements of strict; recommended to use the above circuit.

Note: 1. C2, C3, C5, C6 use high-frequency low-resistance electrolytic capacitors, and the total capacity must not exceed the maximum capacitive load labeled in the manual, otherwise the module will not start normally.

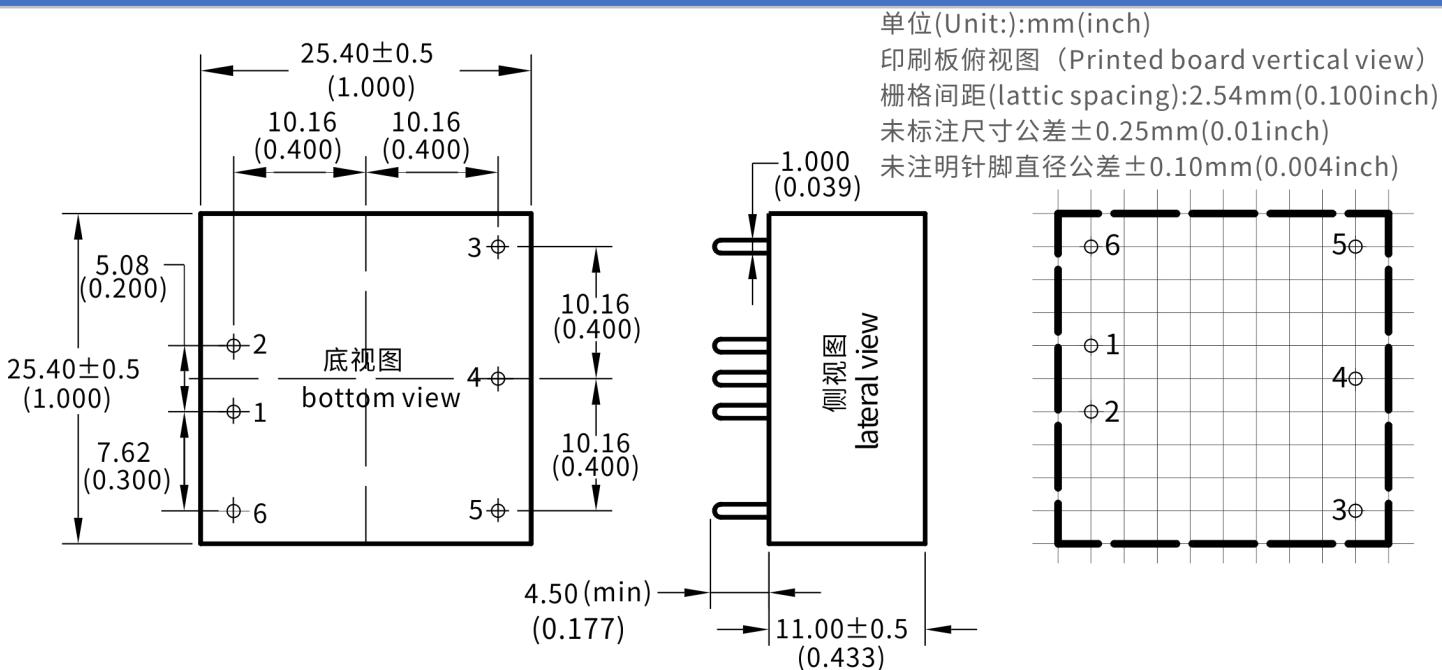

2. 3% minimum load must be guaranteed for capacitive load, otherwise it will cause module output abnormality.

3. LDM5 is only used for dual output products.

Parameter recommendation:

Device code	3.3V output	±5V or 5V output	±9V/12V or 9V/12V output	±15V or 15V output	±24V or 24V output

Test Application Reference

Recommended test circuit 1, DC/DC test circuit:

General recommended capacitance: C1: 47-100μF; C2, C3: 10-22μF.

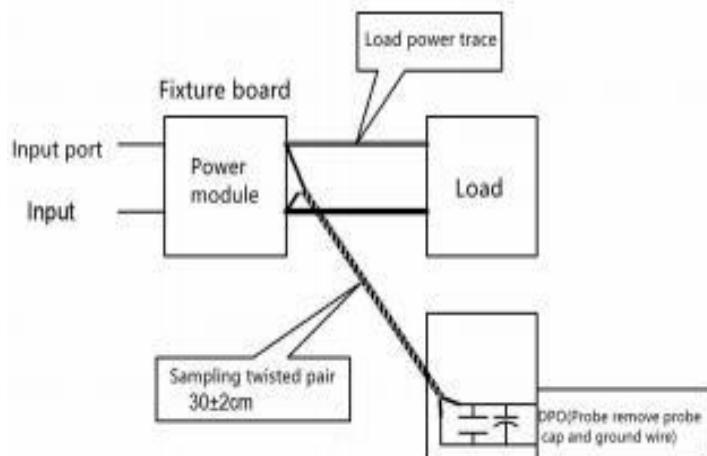

Ripple & Noise Test: (Twisted Pair Method 20MHZ Bandwidth)

Test method:

1. Ripple noise is the use of 12 # twisted pair connection, oscilloscope bandwidth is set to 20MHz, 100M bandwidth probe, and in the probe end in parallel with 0.1uF polypropylene capacitors and 47uF high-frequency low-resistance electrolytic capacitors, the oscilloscope sampling using Sample sampling mode.

2. Output ripple noise test schematic:

Connect the power input to the input power supply, the power output is connected to the electronic load through the fixture board, and the test is conducted with a 30cm±2cm sampling line directly from the power output port. Power line according to the size of the output current to select the appropriate wire diameter of the wire with insulation.
