Product Description

Best-selling **LED driver switch transformer bobbin** made of PA66, featuring high strength, excellent mechanical properties, and glass fiber reinforcement. PA66 provides high-strength support for POT05 potted transformer cores. The tensile strength of the unreinforced material is ≥ 80 MPa, while the glass fiber-reinforced version reaches 150 MPa+. It offers impact and vibration resistance, maintains shape during winding, and is suitable for automated production and long-term operation.
