3.2 Gear Introduction

- **High current measurement:** Connect the red probe to the 10A jack, and the black probe to the COM jack.
※ **Note:** Measuring currents greater than 10A will blow the fuse. Please evaluate the current before measurement.
- **Low current measurement:** Connect the red probe to the mA jack, and the black probe to the COM jack.
※ **Note:** Measuring currents greater than 1A will blow the fuse. Please evaluate the current before measurement, and if unsure, measure on the high current setting first.
- **Auto, voltage, resistance, capacitance, temperature, diode/continuity measurement:** Connect the red probe to the first hole, and the black probe to COM. Switch to the appropriate function setting depending on the parameter being measured.
- **Auto range:** Can only automatically detect voltage and resistance. When measuring voltage, it will automatically detect AC/DC voltage.
- **Diode/continuity range:** When measuring continuity, if the resistance value is $<50\Omega$, the buzzer will sound. When measuring a diode, the screen will display forward bias. If the test lead polarity is opposite to the diode polarity, or if the diode is damaged, the screen will display "OL".
